

Department of Computer Science and Information Technology

Industry Project 2019

- A group of sensors connected through LoRaWAN to a gateway
- A connection through the gateway directly to the IoT platform for sending and receiving the collected data
- An IoT platform set up for managing the data to and from the sensors
- A visualisation environment to illustrate the sensors activities
- A machine learning algorithm to extract features and detect certain patterns in the logged data

Development Tools

Team F

Team Members: Michael Owczarek, Joel Morran,
James Curnow, Remi Petit & Luis Shigetomi
Supervisor: Aidin Bervan
Lecturer: Amin B. Abkenar
